

Task Objective

Build a **local integration** between a **WooCommerce store** (running locally using WordPress) and a **CRM** (Zoho CRM Free). The goal is to **automatically send customer order data** from WooCommerce into the CRM as a **Contact and Deal/Lead**.

What You Will Learn

- Working with REST APIs (WooCommerce + CRM)
 - Using OAuth2 / API tokens
 - Data mapping and integration logic
 - CRM module structure (Contacts, Deals)
 - Testing integrations with local environments
-

Requirements

WooCommerce (Local Setup)

- Install [LocalWP](#) (free WordPress environment manager)
- Create a new local WordPress website
- Install the **WooCommerce** plugin
- Add at least **3 sample products**
- Place **2 test orders** (as a dummy customer)

CRM

Zoho CRM

- Sign up for a **Zoho One free trial**: <https://www.zoho.com/one/signup.html>

- Use the **Zoho CRM API (v8)**
- Learn how to authenticate using **OAuth2**
- Use CRM modules: **Contacts, Deals**

Integration Tools

- **Use Zoho Language (Deluge)**
 - Use **WooCommerce REST API** to read new orders
 - Use **CRM API** to create/update Contacts and Deals
-

Integration Workflow

1. A customer places an order on your **local WooCommerce** store.
 2. Your script/API fetches the latest **order details**, including:
 - Customer name and email
 - Products ordered
 - Order total
 3. Your script sends this data to the **CRM API**:
 - Create or update a **Contact** (customer info)
 - Create a new **Deal** or **Lead** with order value and title
 4. **Verify the result** by logging into the CRM and checking if the contact and deal exist.
-

Tools & Resources

- **WooCommerce API Docs:** <https://woocommerce.github.io/woocommerce-rest-api-docs/>
 - **Zoho CRM API Docs:** <https://www.zoho.com/crm/developer/docs/api/v8/>
 - **HubSpot CRM API Docs:** <https://developers.hubspot.com/docs/api/crm>
 - **Postman:** <https://www.postman.com/>
 - **LocalWP (WordPress local tool):** <https://localwp.com/>
-

Notes

- No hosting is needed — everything runs **locally** on your machine.
- All tools are **free** — no paid plugins or licenses required.
- Focus on using **real APIs** — not just mockups or static data.
- Use **dummy test data** —
